

TAITE K PERUMAL

Software Engineering Student • Co-Founder, ParkSentry

Johannesburg, South Africa | 081 330 3428 | taiteperumal952@gmail.com | github.com/0day-1s | 0day-1s.github.io/portfolio

*Software Engineering student targeting Software Engineering and **Cybersecurity** internships, with hands-on experience building a multi-tenant SaaS platform, a C# desktop application, and database-driven systems. Seeking to contribute existing development capabilities to a technical team while continuing to grow.*

CAPABILITIES

Currently building 4 projects spanning an in-development multi-tenant SaaS platform, a completed C# desktop application, a database-driven system, and a deployed production portfolio website — covering application development, databases, web technologies, and information security.

Languages & Frameworks

- C#/.NET, WPF, Java, TypeScript, HTML/CSS/JS

Database & Architecture

- MySQL & SQL, relational design and normalisation (1NF–3NF), multi-tier / multi-tenant system architecture

DevOps & Tools

- Git & GitHub, GitHub Actions (CI/CD), REST API integration, MySQL Workbench, draw.io

Practices

- Systems analysis, **information security principles**, requirements → documentation → delivery, independent learning of new technologies

PROJECTS

ParkSentry — Co-Founder & Developer — In Development

TypeScript • Next.js • Multi-tenant Architecture • SaaS

- Co-founding a smart parking and payment management SaaS platform from the ground up, alongside a business partner
- Designing a white-label, multi-tenant architecture supporting a six-tier user role system
- Owning technical documentation and delivery planning: SLAs, POPIA compliance, privacy policy, and terms of use

CyberShield — Developer

C# • WPF • Newtonsoft.Json • GitHub Actions

- Built a WPF desktop application with sentiment detection, keyword-based responses, and conversational memory
- Designed a 9-step natural-language intent routing system to direct user input to the correct feature (Task Assistant, Quiz, Activity Logger, sentiment-based responses)
- Implemented a Task Assistant, a 14-question quiz module, and an activity logger, all backed by JSON persistence
- Delivered a split-panel chat + TabControl GUI, shipped as tagged releases (v2.0, v2.1) with a GitHub Actions CI pipeline and a recorded presentation

Developer Portfolio — Builder

HTML/CSS/JS • GitHub REST API • GitHub Pages

- Built and deployed a personal portfolio site from scratch, live at 0day-1s.github.io/portfolio
- Integrated the GitHub REST API to pull live repo data, with skeleton loading states and animated stats counters
- Designed a dark, neon-teal aesthetic and resolved cross-device issues including mobile scroll jitter and asset path bugs

Database Design & SQL — Coursework

MySQL • MySQL Workbench • draw.io • ERD / Normalisation

- Normalised a flat bookstore dataset through 1NF–3NF and produced a UML crow's-foot ERD
- Built an Art Gallery database in MySQL Workbench: table design, data population, referential integrity, and SELECT queries

EDUCATION

Diploma in Software Engineering

Rosebank College International | 2025 – Present

Relevant modules:: Programming (C#,Java), Business Information Systems, IT Professional Practice, Operations Systems, Web Design, System Analysis & Design, Information Security, Databases, Human Interaction with computers, IT Project Management.
